

Sensitive shoes

Central Saint Martins, University of the Arts London

The 'Sensitive Shoes' offer "*emotional wellbeing*" to the wearer via reflexology and aromatherapy. Whilst walking, pressure points are stimulated by pressing on sensitive pads that correspond with various reflexology points, causing a gentle *glow* from the underside of the sole. The ball of the foot touches on the solar plexus point - the centre of emotional energy. The shoes offer an emotional '*bath of light*' experience so that the act of walking is "healing". The light also creates novel olfactory experiences as subtle fragrance molecules are dispensed via the heel to heightened sensation.
