### • FREEBEE - 'SCIENTIEBES'

#### A rich and sweet honey aroma

A warm honey accord resting on a sweet ambery undertoned a smart second skin fine fragrance for scientiebess

The absolute of bees wax has a most pleasant fragrance that directly reminds of honey perfume and of its symbolic meaning, the sweetness and the fullness of spiritual nutriment.

Its scent communicates warmth and protection. It gives confidence and comfort and helps to harmoniously integrate the contrasting aspects of personality.

When we feel disappointed, bitter or wounded, it is the aroma that irradiates the solar force of the light and heals the inner pains

It is honey that opens the heart and brings us into contact with our own positive emotions.

The perfume of bee's wax emanates, shining like the sunlight, the joyful energy of the bees perpetually busy in singing the divine praise through their happiness to work.

'Scientiebess' fragrance appeals to hyperactive persons who must draw from their organizational capacity.

**float like a butterfly  
sting like a bee**

**birds do it  
bees do it  
even educated fleas do it  
lets do it  
lets fall in love**

*With special thanks to Sophia Mei Catherine Mitchell and Clare De Souza IFF (London)*
