+44(0)207 514 2173

Learn the who, when and why of Web 2.0 and how Ruby on Rails is leading developers in the right direction. We'll talk about the technologies, look at some examples (both good and bad) and discover why Web 2.0 improves a users web experience.

Jamie van Dyke

Jamie van Dyke is a highly experienced web developer, consultant and trainer specialising in the Ruby

on Rails web framework. He has extensive experience working for major UK companies in both systems management and software development and now leverages this unique point of view to focus on developing websites and infrastructures using the Rails framework. Jamie runs a successful company called Fear of Fish, based in the UK.

SCIRIA Research Unit

The SCIRIA Research Unit focuses on art and science collaborative research. Current areas of investigation include: creativity and cognition, multi-sensory computer interfaces and the virtual representation of cultural heritage artefacts. The Unit explores and develops the potential applications of emerging interface technologies, including haptics, gesture syntax and biometrics.
